Case Study: Chartered Accountants

Company info:

Gerber Botha & Gowar: With offices in Cradock, Middelburg, Graaff-Reinet, Somerset East, Aberdeen

Kirkwood and Adelaide, the company is well placed to offer personal service to individuals and businesses in the Eastern Cape.

The firm is proud to have built a solid reputation for reliability, trustworthiness and expertise in a number of financial fields.

The Challenge:

With over 1200 clients, the firm's manual way of allocating print and copy jobs was becoming very time consuming.

Due to time constraints many print jobs were unaccounted for.

The solution:

- Assessment of Gerber Botha and Gowar's hardware through monthly device counter readings and paper consumption. Meeting with the IT department to ensure system compatibility
- To decrease output expenses, Gerber mixed- brand fleet was replaced with Kyocera multifunctional printers.
- Installation of MyQ for accurate cost allocation and ease of access.
- Each client was given a unique project code and this code would be used by the Gerber and Botha staff to allocate print and copy jobs.

- Enforce cost saving policies e.g. deleting print jobs at device and allocating print quotas per department.

The results:

- Billable Prints and copies have increased by **40%**
- Staff can print, scan and copy to or from any device on the network by logging into the device with use of a pin.
- Internal usage has decreased
